

My name is Sanil Srivastava and I am currently a first year software engineering student at Carleton. I am an involved member of the Carleton engineering community and I am looking to expand my involvement next year. I think being the software engineering representative for the 23-24 school year would be an amazing way to do so. As the software rep, I would be an involved member of the CSES community and bring up issues software engineering students face to the engineering faculty board and at stream society meetings. I would also design and make software engineering hoodies as I have noticed many software engineering students, including myself, have wanted them. I would make a great fit for the software engineering rep position as I deeply care about the program that I am part of and want to help fix any problems that arise to allow for all software engineering students to have the best education possible. Additionally, I am currently the 3d printing director, a first year representative, and an assistant publications for SCESoc which is the stream society for software so I understand how to work as a part of a carleton engineering organization. Most importantly, I have a positive attitude and a great work ethic which is why I would make an amazing software representative.
